### Vein Therapy from an Expert

Dr. Green offers the best combination of medical care, skin care and beauty care. Don't let unsightly veins keep you from showing off your legs! Living in the sailboat capital of the U.S. means wearing swimsuits, shorts and skirts. Whether you're sunbathing on a boat deck or tending to the garden, you may feel confined to wearing long slacks or a cover up if you have varicose or spider veins.

Many women find after a certain age or after child bearing, unattractive veins begin to appear on their legs and other areas. Men also experience spider veins when excess pressure causes the veins to appear. Standing or sitting for long periods, weight gain, and the female hormone estrogen can contribute to those spidery, purple and blue veins. Spider veins can be easily removed with Sclerotherapy treatments, which is the injection of a chemical solution that causes the vein to collapse and eventually disappear.

#### How Sclerotherapy Works

A saline or sclerosing solution is injected directly into the vein using a very tiny needle. The solution causes the blood vessel wall to collapse and eventually disappear. Spider vein treatments must be personalized for each patient. Therefore, a thorough consultation which includes a medical examination and family medical history will be the first step in your treatment. Treatments usually take from 15 to 30 minutes. Multiple sessions that take place once a month are generally recommended for best results.

Dr. Green is considered one of the area's leading experts in vein therapy and has over 25 years experience, treating thousands of patients who are delighted with their results. To begin your journey to thorough and evenly toned skin, schedule a consultation at the Cosmetic & Laser Center by calling 410-974-6444. For your convenience, evening appointments are available.

## Say "Ta-Ta" to Your Tattoo

Tired of that butterfly on your lower back or that barbed wire on your arm? Laser tattoo removal is more popular than ever! Many people, young and old, joined in the tattoo trend as they became popular towards the end of the 1980s. As those same people aged, they decided the tattoo no longer suited them or their lifestyle. Now, there is a great demand for laser tattoo removal. If you are one of the thousands of individuals who got a tattoo and now regret that decision, let us help you remove it with some of the most sophisticated tattoo lasers in the business. With devices like the Medlite C6, virtually every color in a tattoo can be eliminated. The MedLite Laser works by using specific wavelengths of light energy that are absorbed by the tattoo ink. This rapid absorption breaks the tattoo ink into tiny particles which are then absorbed by the body. Patients typically need several sessions spaced out over several weeks between treatments.

If you have a tattoo that no longer suits you, call us to schedule a consultation with Dr. Green to determine if laser tattoo removal is the right procedure for you.

## Oh, What A Night!

Join A-List celebrities such as Madonna, Eva Longoria, Sarah Jessica Parker, Kristen Davis, and Justin Timberlake, who depend on Intraceuticals Oxygen Infusions to get ready for their red-carpet "close-ups".

David Green, M.D., F.A.A.D. recently hosted his own "Red Carpet" event, where he introduced the cutting-edge Intraceuticals treatments at the Cosmetic & Laser Center.

Thank you to all of our guests who helped to make the evening a great success! A huge thank you to Rich Campbell, Intraceuticals' Mid-West Regional Account Manager. Rich demonstrated the Oxygen Infusions, a treatment that blends oxygen technology and restorative therapy delivering visible, age-defying results. Our "model" for the evening, Tina Berger, couldn't believe the immediate improvement afterward. Rich offered complimentary treatments to all our guests who reveled in this pampering, soothing treatment.

Intraceuticals infusions use a cooling, forced stream of oxygen with a treatment wand to drive a hyaluronic-acid serum from the

epidermis (the skin's surface) to the dermis underneath. Hyaluronic acid, a molecule the skin also makes, can hold up to 1,000 times its weight in water. Intraceuticals treatments hydrate the skin, immediately firm, soften fine lines, and give the complexion a healthy glow.

### **Message from Theresa, Skin Care Coach**

In order to maintain the results of your cosmetic treatments and procedures, the "TLC" you provide for your skin needs to be consistent throughout the year, no matter what the season. Even though we all love a little fun in the sun,

whether it be boating on the Bay, tending our garden, or sunbathing for a "little color", sun protection is a must!

We know a lot more about protecting skin from UV-induced photo-aging and skin cancer today than we did years ago. Choosing a professional skin care SPF that incorporates a clinically-proven antioxidant with a true broad-spectrum sunscreen provides the best protection for your skin.

For the patient with sensitive skin, I suggest a mineral based/non-comedogenic sunscreen. My personal favorite is Glytone's Mineral SPF 40. To keep the skin hydrated and nourished I recommend our Deluxe Hydrating Facial and Intraceuticals Oxygen Infusion. Both treatments offer no down time and no conflict with sun exposure.

### **\$25 Reward for Referring Your Friend to Us**

We realize that there are many options available when choosing a dermatologist. Our hope is that you are very happy with the care and treatment you receive at the Cosmetic & Laser Center and will take advantage of our newly-launched Rewards Referral Program.

For each new patient you refer, we will give the referring patient and their friend a \$25 credit toward any future cosmetic aesthetic service.
